

For 20 years, Hi-Tek Barnaclean has been charting a new and exciting course for boaters

with its unique and environmentally-friendly protection for boat hulls and drive systems.

All over the world, Hi-Tek Barnaclean protects vessels; from ocean trawlers to sportfishers, cigarette boats to sailboats;

lasting protection guaranteed. Emitting low frequency sonic waves, Hi-Tek Barnaclean creates a barrier

that blankets the hull and running gear. Hi-Tek Barnaclean is maintenance-free, user-friendly and effective.

FULL 1 YEAR MONEY BACK SATISFACTION GUARANTEE

TESTIMONIALS

"I anticipated that the boat would be in-water all season, I did not want to disturb the aesthetics of the custom paint scheme by antifoulant bottom paint. An electronic resonance system appealed to me, and I specified that it be included as the boat was manufactured. The Hi-Tek Barnaclean system has worked flawlessly and effectively during three boating seasons in waters which are quite prolific for marine life. In short, this system works."

John, Greenland NH

"It's a fish catcher.' Now all my competitors are buying systems!"

Dino Houston TX

"I had a 32' motor yacht docked and bottom cleaning was almost a constant, tedious and time consuming activity. Then I installed the Hi-Tek Barnaclean system myself in about three hours time, and , for the almost three and a half years that I kept the boat, there was absolutely no barnacle growth to scrape off. "

Pedro, MD

What is Barnaclean?

Barnaclean is an affordable anti-fouling system that incorporates the latest in proven sonic technology to inhibit marine organisms such as barnacles, zebra mussels, oysters, clams and tube worms from attaching themselves to your boat's hull and drive system.

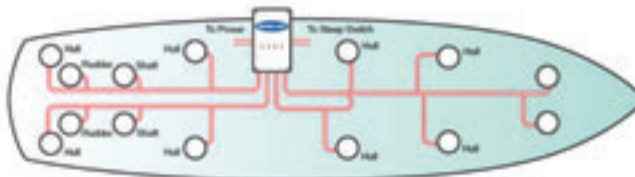

How does Barnaclean Work?

The concept is simple, yet sophisticated in terms of its marine engineering application! Barnaclean utilizes a compact microprocessor control unit in conjunction with strategically positioned sonic resonators which are secured to the inside of your hull (no through-hull fittings necessary!). The number of required resonators will vary according to the size of your boat, with each covering a ten-foot diameter. When the resonators are activated by the control unit, two very interesting results occur: First, the vibration or resonance appears to the barnacle like an unwanted marine predator, thereby sending a red-banner warning. Second, this resonance creates a micro-thin layer of rapidly-moving water which acts to blanket the hull and running gear, hence making it difficult for fouling organisms and algae to attach. Best of all, Barnaclean performs its job automatically without any toxic chemical action which could harm or endanger the marine environment!

“Easily controlled with sleep or timer mode”

How is Barnaclean installed?

Barnaclean can be installed by the do-it-yourself captain and/or crew or you may want to contact your neighborhood boatyard to do the work for you. Either way, Barnaclean is a simple, straightforward installation which requires the simplest of tools. Each system is shipped with a complete installation manual and, if needed, our staff is also ready to answer any questions you might have.

“HI-TEK BARNACLEAN will work on any boat with a hull up to 1”thick”

Does Barnaclean work on all boats?

Barnaclean works on 90 percent of all boats in the marketplace, with few exceptions. It does not work on boats with cored fiberglass hulls or solid fiberglass bottoms in excess of one inch thickness. Barnaclean is also limited with metal hulls to a maximum plate thickness of .25 inch. Special consideration must be given to installation in those hulls which feature an over-abundance of structural members including heavy frames, ribs or longitudinal stringers.

NO MORE BARNACLES

12 volt, Drawing .6amps
